## ***KUHN CELEBRATES 20 YEARS OF SUCCESS WITH EMC TECHNOLOGY***

**PALMERSTON NORTH – (1<sup>st</sup> November 2019)** For 20 years, KUHN fertiliser spreader operators have been distributing the right amount of fertiliser in the right place at the right rate using our patented Electronic Mass Flow Control (EMC) technology.

EMC is a unique technology that is well established in the industry and has been proven after years of experience. The EMC system regulates product flow using electromagnetic torque sensors to control the rate of material falling to each disc separately. This unique system allows each field to get the right amount of fertiliser every time.

Throughout its history, the EMC system has won multiple international awards including at Agritechnica, SIMA, ABRIBEX and EIMA. In North America, the Axis H-EMC line of fertiliser spreaders was recognized by ASABE as one of 2015's most innovative products because of the EMC system.

Today, KUHN uses EMC technology on our Axis® and Axent™ precision fertiliser spreaders to help farmers around the world, meet their spreading needs.

To learn more about KUHN's EMC system and how it can help you achieve your operation's fertiliser spreading goals visit: <https://youtu.be/E0bRFo0crDM>.
